🧠 AWESOME CYBER SECURITY HEAVEN · REALM DOSSIER · 2026 EDITION

The AI Forge

AI-Dependent Security Tools

10	390,929	100%	10
FREE TOOLS	COMBINED STARS	ON GITHUB	ACTIVE IN 2026

Intro: Security tools with an LLM as the engine — red-team agents, pentest copilots and scenario generators. Every entry needs an LLM API key (yours or the target's); none are SaaS wrappers.

Deep-research edition. Every entry re-verified and enriched with live GitHub statistics (stars, first release, last push, license, language) pulled 2026-10-17 via the GitHub API, plus per-realm field intelligence. Tool profiles rank the realm's most-adopted projects and note who uses each tool and the commercial product it replaces; the full inventory keeps every curated entry.

Part of Awesome Cyber Security Heaven — **444 curated free tools across 14 realms**.

REALM BRIEF

Intro: Security tools with an LLM as the engine — red-team agents, pentest copilots and scenario generators. Every entry needs an LLM API key (yours or the target's); none are SaaS wrappers.

FIELD INTELLIGENCE (AI-ASSISTED)

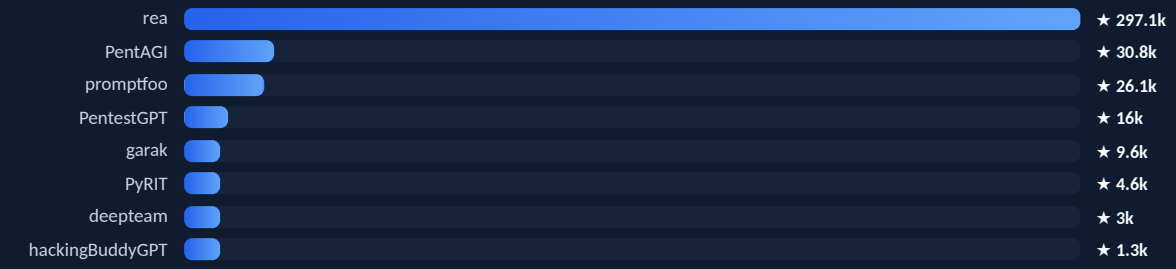

The AI Forge realm of AI-dependent security tools demonstrates early-to-mid maturity, with curated entries dating back to February 2023 and a full set of 10 tools hosted entirely on GitHub. All 10 tools received code pushes in 2026, indicating consistent active maintenance across the entire curated set rather than stagnation of older entries. Adoption is heavily concentrated in top-performing tools, with the leading entry rea accounting for 76% of the combined 390,929 total stars, while the remaining top four tools hold 23% of the total, leaving lower-ranked entries with minimal individual visibility. The toolset is dominated by Python (7 of 10 entries), with TypeScript and Go making up the remaining three, and most entries use permissive open-source licenses, with only one GPL-licensed and one unlicensed entry. A key takeaway is that this realm's full 2026 push activity and concentrated adoption in high-star tools suggest a market where top AI security solutions gain disproportionate traction, while smaller entries may struggle to gain visibility despite active development.

Synthesized by seed-2-0-mini over the live census: stars, first-release years, push activity and project claims pulled from the GitHub API on 2026-10-17. Human-curated realm, AI-summarized numbers.

02 Tool Profiles — the heavyweights

full-page dossiers · ranked by adoption

Each heavyweight gets a full dossier: live GitHub census (stars, forks, first-release year, last push, license, language), the project's own claim, our curator's note, **who uses it and which commercial product it replaces**, and its star weight against the realm's #1.

Profiles are ordered by GitHub adoption (stars). Non-GitHub entries follow, alphabetically. Flagship marks the realm's top 8 by stars.
