Deep-research edition. Every entry re-verified and enriched with live GitHub statistics (stars, first release, last push, license, language) pulled 2026-10-17 via the GitHub API, plus per-realm field intelligence. Tool profiles rank the realm's most-adopted projects and note who uses each tool and the commercial product it replaces; the full inventory keeps every curated entry.

Part of Awesome Cyber Security Heaven — **444 curated free tools across 14 realms**.

REALM BRIEF

Intro: Free (or free-tier) data sources every security program should be using — no budget required.

FIELD INTELLIGENCE (AI-ASSISTED)

The Free Bazaar realm hosts 30 curated free cybersecurity APIs, feeds, and data tools, with 10 (33%) of those repositories hosted on GitHub, the oldest dating to February 19, 2012. Adoption is heavily concentrated in the top five tools, which account for 113,800 of the realm's combined 117,547 stars, with SecLists alone holding 74.2k stars, dwarfing the next two leading tools at 27.4k and 7.3k stars respectively. Only 6 of the 30 tools received code pushes in 2026, leaving four quiet classics—Security Datasets, EVTX-ATTACK-SAMPLES, MITRE Cyber Analytics Repository, and Boss of the SOC—without recent updates, suggesting a split between actively maintained projects and long-standing, less frequently updated resources. The license mix is evenly split between permissive MIT and Apache-2.0 licenses (3 each), with 1 tool under GPL and 3 with other or no licenses, and Python is the most common language used by 4 of the curated tools, indicating a preference for flexible, widely adopted scripting for cybersecurity data work. A notable takeaway is that while the realm's top tools drive most community engagement, the majority of projects have not seen recent code activity, creating a gap between high-impact, well-maintained resources and legacy tools that may require community support to remain relevant.

Synthesized by seed-2-0-mini over the live census: stars, first-release years, push activity and project claims pulled from the GitHub API on 2026-10-17. Human-curated realm, AI-summarized numbers.

02 Tool Profiles — the heavyweights

full-page dossiers · ranked by adoption

Each heavyweight gets a full dossier: live GitHub census (stars, forks, first-release year, last push, license, language), the project's own claim, our curator's note, **who uses it and which commercial product it replaces**, and its star weight against the realm's #1.

Profiles are ordered by GitHub adoption (stars). Non-GitHub entries follow, alphabetically. Flagship marks the realm's top 8 by stars.
