🕵️ AWESOME CYBER SECURITY HEAVEN · REALM DOSSIER · 2026 EDITION

The Shadow Bureau

OSINT & Public-Intelligence Tools

29	189,476	76%	18
FREE TOOLS	COMBINED STARS	ON GITHUB	ACTIVE IN 2026

Intro: Public data, lawful purpose — OSINT frameworks, people-search, breach lookups, site monitoring and archive history for investigators, defenders and researchers. These tools only surface what is already public; use them for authorized investigations, defense and education only — never to stalk, harass or dox anyone.

Deep-research edition. Every entry re-verified and enriched with live GitHub statistics (stars, first release, last push, license, language) pulled 2026-10-17 via the GitHub API, plus per-realm field intelligence. Tool profiles rank the realm's most-adopted projects and note who uses each tool and the commercial product it replaces; the full inventory keeps every curated entry.

Part of Awesome Cyber Security Heaven — **444 curated free tools across 14 realms**.

REALM BRIEF

Intro: Public data, lawful purpose — OSINT frameworks, people-search, breach lookups, site monitoring and archive history for investigators, defenders and researchers. These tools only surface what is already public; use them for authorized investigations, defense and education only — never to stalk, harass or dox anyone.

FIELD INTELLIGENCE (AI-ASSISTED)

The Shadow Bureau OSINT and public-intelligence realm, active since 2015, curates 29 tools, 22 of which are hosted on GitHub, with 76% of its code repositories living on the platform. Adoption is heavily concentrated in top tools: maigret, web-check, changedetection.io, PhoneInfoga, and holehe account for nearly 90% of the realm's combined 189,476 stars, with a median of 1,629 stars across all entries. Maintenance activity shows 18 tools received code pushes in 2026, leaving four quiet classics—chiasmodon, holehe, waybackpy, and waybackpack—with no recent updates, indicating a split between actively developed and long-standing, less maintained resources. The realm's language stack is dominated by Python, used for 15 tools, while its license mix leans toward permissive MIT licenses at 12 entries, alongside 7 GPL tools and 2 with no formal license. A key takeaway is that the top-performing tools also include one of the quiet classics, holehe, suggesting sustained community use even without recent official code pushes.

Synthesized by seed-2-0-mini over the live census: stars, first-release years, push activity and project claims pulled from the GitHub API on 2026-10-17. Human-curated realm, AI-summarized numbers.

02 Tool Profiles — the heavyweights

full-page dossiers · ranked by adoption

Each heavyweight gets a full dossier: live GitHub census (stars, forks, first-release year, last push, license, language), the project's own claim, our curator's note, **who uses it and which commercial product it replaces**, and its star weight against the realm's #1.

Profiles are ordered by GitHub adoption (stars). Non-GitHub entries follow, alphabetically. Flagship marks the realm's top 8 by stars.
