117 tools · Part of Awesome Cyber Security Heaven — 1435 curated free tools across 14 realms · Data verified 2026-11-06 (re-verified monthly)

CURATOR'S NOTES

The swiss-army shelf: netcat-lineage utilities, intercept proxies, transport plumbing (Tor, socat), debuggers and format-inspectors. Unspecialized by definition — the tools you reach for when nothing specialized fits.

MAINTENANCE SNAPSHOT (2026-11-06)

- **Active in the last 30 days:** 45 of 57 tracked GitHub repos (79%)
- **Quiet classics (no push in 12+ months, still listed):** Brida
- **Earliest entries:** mitmproxy (2010), Netron (2010), Apktool (2012)

FLAGSHIP PICKS — THE HEAVYWEIGHTS

TOOL	★ STARS	CREATED	LAST PUSH	WHAT IT DOES
Ghidra	96.6k	2019	2026-10-30 ✅	Ghidra is a software reverse engineering (SRE) framework
ImHex	55.7k	2020	2026-10-09 ✅	🔍 A Hex Editor for Reverse Engineers, Programmers and people who value their retinas when working at 3 AM.
jadx	51.4k	2013	2026-10-30 ✅	Dex to Java decompiler
x64dbg	50.1k	2015	2026-10-28 ✅	An open-source user mode debugger for Windows. Optimized for reverse engineering and malware analysis.
mitmproxy	46.5k	2010	2026-10-30 ✅	An interactive TLS-capable intercepting HTTP proxy for penetration testers and software developers.
CyberChef	36.3k	2016	2026-10-30 ✅	The Cyber Swiss Army Knife - a web app for encryption, encoding, compression and data analysis

Full inventory — 117 curated tools · ranked by GitHub adoption · 2026-11-06 census · non-GitHub tools listed without stars

TOOL	★ STARS	CREATED	LAST PUSH	LICENSE / TIER
Ghidra	96.6k	2019	2026-10-30 ✅	— the NSA's open-source reverse-engineering suite; disassembly, decompilation and scripting for free. Used by reverse engineers analyzing binaries of any architecture; the NSA's free suite that stands in for IDA Pro and Binary Ninja.
ImHex	55.7k	2020	2026-10-09 ✅	— the hex editor with pattern language: parse formats while you view them. Used by reverse engineers parsing binaries with a pattern language; the free hex editor built for RE workflows. (GPL-2.0)
jadx	51.4k	2013	2026-10-30 ✅	— the standard Java/Android decompiler: dex-to-java source recovery with both GUI and CLI — the first stop for APK and JAR analysis. Used by Android reverse engineers decompiling DEX to readable Java; the free decompiler every APK analysis starts with. (Apache-2.0)
x64dbg	50.1k	2015	2026-10-28 ✅	— the open Windows debugger for x32/x64, with a plugin ecosystem built for RE. Used by malware analysts debugging Windows binaries; the free Windows debugger that stands in for commercial debuggers. (GPL-3.0)
mitmproxy	46.5k	2010	2026-10-30 ✅	— interactive HTTPS interception for debugging and testing your own apps; scriptable as a library. Used by developers and pentesters intercepting HTTPS traffic programmatically; the free alternative to Charles Proxy and Fiddler.
CyberChef	36.3k	2016	2026-10-30 ✅	— GCHQ's web Swiss-army knife: 400+ operations for decoding, transforming and analyzing data, all client-side. Used by analysts daily for decoding, crypto and data wrangling; GCHQ's free web tool that replaces a shelf of utilities.

Netron	33.6k	2010	2026-10-31 ✅	— visualize ML models: the layers, weights and graph of what you deploy. Used by ML engineers inspecting model architectures; the free visualizer for neural-network files. (MIT)
OpenSSL	31.1k	2013	2026-10-31 ✅	— the TLS library the internet runs on — and the CLI for keys, certs, CSRs and everything crypto. Used by literally everyone through the TLS it provides; the open library the commercial internet runs on.
Apktool	26.9k	2012	2026-10-28 ✅	— disassemble and rebuild Android APKs: decode resources to near-original form, patch smali, repackage and sign — the Android RE classic. Used by mobile pentesters decoding Android resources and smali; the standard free APK disassembler. (Apache-2.0)
radare2	25.2k	2012	2026-11-01 ✅	— the scriptable reverse-engineering framework: disassemble, debug, patch, anywhere. Used by reverse engineers scripting binary analysis; the free framework that powers many commercial RE pipelines. (LGPL-3.0)
Frida	22.6k	2013	2026-10-30 ✅	— inject JavaScript into running processes; dynamic instrumentation for mobile, desktop and IoT. Used by mobile pentesters and researchers injecting logic into running processes; the dynamic-instrumentation standard. (GPL-2.0 / wxWindows dual)
Ciphey	21.7k	2019	2026-11-01 ✅	— automated decoder: paste ciphertext, get plaintext plus the method used — evidence triage in seconds. Used by CTF players and analysts auto-decoding ciphertext; the free automated decoder.
Cutter	20.1k	2017	2026-09-11	— free and open reverse-engineering platform powered by rizin: graph disassembly, decompiler views and debugging in a polished desktop UI. Used by RE learners driving Ghidra through a friendlier GUI; the free reverse-engineering IDE. (GPL-3.0)
Cheat Engine	19.4k	2015	2025-04-19 ⏳	— Industry-standard memory scanner and editor for game hacking, featuring value scanning, pointer scanning, code injection, and Lua scripting. Used by game hackers and reverse engineers; the de facto memory-editing workbench.
XERJ	18.5k	2026	2026-11-01 ✅	— local-first search engine and MCP server in a single Rust binary: hybrid BM25 + vector search over code, docs, logs and PDFs with an Elasticsearch-compatible API — for agents and humans alike. Used by security teams giving AI agents searchable, air-gapped memory over case files and codebases; the self-hosted retrieval layer for agent workflows. (Apache-2.0)
binwalk	14.6k	2013	2026-08-11	— firmware analysis: scan, extract and identify embedded files and filesystems. Used by firmware researchers extracting embedded filesystems and images; the standard free firmware-analysis tool. (MIT)
Scapy	12.7k	2015	2026-10-29 ✅	— packet crafting without limits: forge, sniff, dissect and send anything — the Python network Swiss-army knife. Used by network researchers crafting packets in Python; the standard library protocol testing builds on. (GPL-2.0)
Detect It Easy	11.8k	2014	2026-10-30 ✅	— packer/compiler/protection detection with a rule engine. Used by malware analysts identifying packers and compilers; the free packer-detection standard. (MIT)
dnSpyEx	11.4k	2021	2026-10-17 ✅	— the .NET debugger and decompiler, continued; edit assemblies live. Used by .NET researchers decompiling and debugging managed code; the maintained fork of the classic .NET debugger. (GPL-3.0)
pwndbg	11.1k	2015	2026-11-01 ✅	— GDB with a exploit-dev UX: heap awareness, shortcuts and sane defaults. Used by CTF players and exploit developers making GDB pwn-friendly; the standard GDB plugin for exploitation work. (MIT)
CTF Tools	9.6k	2015	2026-10-21 ✅	— Setup scripts for security research tools commonly used in CTFs and binary exploitation. Used by CTF players and researchers; a convenient tooling installer. (BSD-3-Clause)
Capstone	9.2k	2013	2026-10-27 ✅	— the disassembly framework behind countless security tools. Used by security developers embedding disassembly; the free engine behind countless RE and EDR tools. (BSD-3-Clause)
pyWhat	7.3k	2021	2026-10-13 ✅	— identify anything: hashes, keys, URLs, PII — the "what is this string?" answer. Used by analysts identifying arbitrary blobs and strings; the free 'what is this' identifier.
Faraday	6.8k	2013	2026-10-29 ✅	— the pentest collaboration platform: import tool output, deduplicate findings and manage the whole engagement. Used by pentest teams collaborating on findings; the community edition of the commercial collaboration platform. (GPL-3.0)

Dangerzone	5.8k	2020	2026-10-29 ✅	— takes hostile documents and re-renders them as safe PDFs inside an isolated sandbox. Used by newsrooms converting untrusted documents into safe PDFs; the free sanitization tool for adversarial files. (AGPL-3.0)
UEFITool	5.8k	2013	2026-10-27 ✅	— parse, extract and replace UEFI firmware images. Used by firmware analysts parsing UEFI images; the free tool for BIOS/UEFI research. (BSD-2-Clause)
ExifTool	5.2k	2018	2026-10-28 ✅	— the metadata reader/writer for files and images; the last word in metadata triage. Used by investigators reading and stripping file metadata; the standard free metadata tool used across forensics. (Perl Artistic/GPL)
DefectDojo	5.2k	2015	2026-11-01 ✅	— open-source vulnerability management and AppSec platform: import findings from your whole scanner fleet, deduplicate, track remediation and map to compliance from one self-hosted app. Used by security teams running continuous vulnerability management across scanners; the free alternative to commercial ASPM platforms. (BSD-3-Clause)
Kaitai Struct	4.7k	2016	2026-10-26 ✅	— declare a binary format once, generate parsers for nine languages. Used by protocol researchers declaring binary formats as YAML; the free declarative parser generator for format RE. (MIT)
Interactsh	4.6k	2021	2026-10-31 ✅	— out-of-band interaction server for detecting blind vulnerabilities (SSRF, blind RCE, blind XXE). Used by bug hunters detecting out-of-band interactions blind spots miss; ProjectDiscovery's free alternative to Burp Collaborator.
Lychee	4.1k	2020	2026-11-02 ✅	— Fast broken link checker that can be used to spot dead or suspicious links across sites and repositories. Used by developers and security testers; a utility with light security-adjacent value. (Apache-2.0)
Evan's Debugger	3k	2015	2026-10-27 ✅	— the C/C++ debugger with a RE focus: memory views built for analysis. Used by RE practitioners debugging Linux binaries in a GUI; the free Qt-based debugger. (GPL-2.0+)
can-utils	3.0k	2015	2026-10-14 ✅	— Essential SocketCAN userspace utilities including candump, cansend, and cangen for capture, injection, and fuzzing. Used by automotive engineers; the standard CAN toolkit. (GPL-2.0)
pwndoc	2.9k	2020	2026-10-26 ✅	— offline pentest report generator: reusable finding databases, CVSS scoring and multi-language docx templates that turn engagement notes into client-ready reports. Used by pentesters producing polished client reports without cloud tooling; the free offline reporting suite for engagements. (MIT)
Stress-ng	2.8k	2015	2026-11-05 ✅	— Tool that stress tests CPU, RAM, I/O, and more with a wide range of configurable stressors. Used by sysadmins and testers; a comprehensive system stress-testing utility. (GPL-2.0)
ATT&CK Navigator	2.5k	2018	2026-11-01 ✅	— MITRE's matrix explorer: layer, annotate and score ATT&CK techniques for detection-coverage planning. Used by purple teams planning and visualizing coverage; the free MITRE tool for layer-based ATT&CK exploration.
Inspectrum	2.5k	2015	2025-12-06 ⏳	— Offline spectrum analysis tool with spectrogram visualization, zoom and pan for examining captured RF signals including Iridium bursts. Used by RF analysts and satellite researchers; a focused tool for inspecting recorded IQ data. (GPL-3.0)
SatDump	2.5k	2021	2026-11-03 ✅	— Satellite image decoding software supporting a wide range of weather and Earth observation satellites, processing received RF signals into imagery. Used by satellite hobbyists and researchers; a comprehensive decoder for many downlink formats. (GPL-3.0)
boofuzz	2.4k	2015	2026-09-21	— network protocol fuzzing framework descended from Sulley — script your protocol and hardware bug hunts. Used by protocol fuzzers finding crashes in network services; the open-source fuzzing framework from the Sulley lineage. (GPL-2.0)
ReClass.NET	2.2k	2016	2024-05-10 ⏳	— Memory scanner and structure dissect tool for the .NET platform with a plugin ecosystem for visualizing process memory. Used by game hackers and reverse engineers; a modern, extensible alternative to classic class-rebuilding tools. (MIT)
Brida	1.9k	2017	2025-10-30 ⏳	— the bridge between Burp and Frida: custom instrumentation in your proxy workflow. Used by mobile pentesters bridging Frida into Burp; the free companion for SSL-pinning bypass work. (MIT)
scanmem	1.9k	2015	2026-11-01 ✅	— Linux memory scanner used for Cheat Engine-style value scanning, allowing game state manipulation via interactive commands. Used by Linux game hackers and reverse engineers; a lightweight, scriptable memory search utility. (GPL-3.0)

tcpreplay	1.4k	2013	2026-10-26 ✅	— replay captured traffic at arbitrary speed for testing and validation. Used by engineers replaying captures at original speed; the free pcap replay tool for testing sensors. (GPL-3.0)
Unfurl	1.3k	2018	2023-08-12 ⏳	— Extracts and parses URLs and their components from text streams for recon and analysis. Used by bug bounty hunters and recon analysts; a handy pipeline utility for URL wrangling. (MIT)
reconmap	1k	2021	2026-10-30 ✅	— Collaboration-first security-operations platform: plan engagements, run and parse recon commands, AI-assist the summaries and export client-ready reports — built for infosec teams and MSSPs. Used by pentest teams managing engagements end to end; the self-hosted alternative to commercial pentest-management SaaS.. (MIT)
GnuPG	995	2015	2026-10-29 ✅	— the free implementation of OpenPGP: encrypt, sign and verify files and mail, everywhere. Used by privacy-conscious users for email and file encryption; the free open implementation of OpenPGP. (GPL-3.0)
OCSF	909	2022	2026-10-30 ✅	— the Open Cybersecurity Schema Framework: one schema for security events. Used by SIEM and security vendors normalizing telemetry; the open schema standard the industry is converging on. (Apache-2.0)
Dradis CE	845	2016	2026-10-30 ✅	— collaborative pentest reporting: team notes, evidence and findings assembled into one professional report. Used by pentest teams assembling reports from tool output; the free edition of the commercial reporting platform. (GPL-2.0)
Hachoir	671	2016	2026-10-14 ✅	— binary field inspection: split any file into its fields, even damaged ones. Used by researchers extracting metadata from damaged binaries; the free Python metadata extractor. (GPL-2.0)
Vulnrepo	583	2017	2026-10-26 ✅	— free end-to-end-encrypted vulnerability report generator and repository: CWE/CVE/MITRE templates, scanner imports, DOCX output and Jira export. Used by pentesters assembling reports fast after engagements; the free alternative to commercial reporting suites. (Apache-2.0)
friTap	565	2021	2026-10-26 ✅	— intercept TLS keys in real time for analysis; a Frida script for the lab. Used by traffic analysts extracting TLS keys from apps via Frida; the free tool for decrypting stubborn mobile traffic. (GPL-3.0)
IPObfuscator	145	2016	2022-07-29 ⏳	— Simple tool converting an IP address to its DWORD representation. Used by pentesters; a small obfuscation helper.
cybersec-toolkit	87	2026	2026-11-01 ✅	— single-command installer for 670+ security tools with an authorization-gated MCP server, allowlist and flag-denylist execution policy and a prompt-injection output sanitizer. Used by security engineers building safe tool environments for AI agents; the least-privilege installer for agent-accessible security tooling. (MIT)
cheat-engine-linux	61	2026	2026-10-21 ✅	— Native C++/Qt6 reimplementation of Cheat Engine for Linux with faster first scans than the official native build. Used by Linux game hackers; a performance-focused memory scanning front end. (NOASSERTION)
espi0n/Dockerfiles	40	2017	2018-08-25 ⏳	— Dockerfiles packaging various OSINT tools for easy deployment. Used by OSINT practitioners; a convenient containerized toolset.
charsetinspect	27	2016	2016-06-23 ⏳	— Script inspecting multi-byte character sets for characters with user-defined properties. Used by security researchers; a niche encoding analysis utility.
PyModbus	0	2015	2015-02-02 ⏳	— Python Modbus library used for simulating industrial environments and crafting custom protocol packets for ICS security testing and fuzzing. Used by ICS developers and testers; a widely adopted building block for Modbus tooling.
angr	—	—	—	— the binary-analysis platform from UCSB's Shellphish: symbolic execution at scale. Used by researchers and CTF players symbolically executing binaries; the free platform for program analysis research. (BSD-2-Clause)
Hex Fiend	—	—	—	— the fast, open-source hex editor for macOS. Used by macOS researchers editing binaries fast. (BSD-2-Clause)
I2P	—	—	—	— the Invisible Internet Project: anonymous, self-organizing overlay network. Used by privacy-focused users running encrypted overlay networking; the free Invisible Internet Project with no commercial counterpart. (multiple open licenses)
netcat	—	—	—	— the original TCP/IP Swiss army knife: reads and writes across networks with one command. Used by everyone from sysadmins to CTF players for raw TCP/UDP plumbing. (freeware)

socat	—	—	—	— the relay for bidirectional data transfer between addresses: TCP, UDP, sockets, pipes. Used by sysadmins and pentesters relaying and shaping network connections; the netcat successor for serious plumbing. (GPL-2.0)
Tails	—	—	—	— the amnesic incognito live system: no trace left on the machine. Used by journalists needing amnesic, compartmentalized computing; the free live system that leaves no trace. (GPL-3.0)
tcpdump	—	—	—	— the command-line packet capture classic; quick looks and long captures where Wireshark won't fit. Used by admins capturing packets on servers without GUIs; the classic free CLI sniffer preinstalled everywhere.
Wireshark	—	—	—	— the packet analyzer everyone knows; deep protocol visibility for troubleshooting and forensics. Used by network engineers and DFIR analysts everywhere; the standard free packet analyzer commercial tools still get compared to. (GPL-2.0)
PentestKit	40	2025	2026-11-01 ✅	— honest authorized-target CLI; per-finding: what, exact evidence, attacker gain, fix; soft-404-aware exposure checks. (MIT)
4ndr0tools userscripts	44	2024	2026-11-01 ✅	— browser userscripts for recon, OSINT lookups, secret scanning and workflow automation. (MIT)
OLYMPUS Security	0	2026	2026-11-01 ✅	— scope-gated assessment platform with chain-of-custody evidence and SARIF secret scanning; every command validates against an explicit scope. (GPL-3.0)
TestDisk	2659	2015	2026-10-25 ✅	— partition-table and file recovery. (GPL-2.0)
androguard	6398	2014	2026-10-25 ✅	— Android RE framework: DEX parsing, decompile, diffing. (Apache-2.0)
hurl	19293	2020	2026-11-01 ✅	— plain-text HTTP requests with assertions. (Apache-2.0)
chisel	16719	2015	2026-10-11 ✅	— TCP tunnel over HTTP. (MIT)
GoReplay	19325	2013	2026-01-27	— capture and replay real HTTP traffic at scale. (LGPL-3.0, open-core)
GQRX	—	—	—	— Software defined radio receiver built on GNU Radio and Qt supporting HackRF, RTL-SDR, Airspy, and USRP hardware for AM/FM/SSB reception. Used by RF hobbyists and security researchers; a popular general-purpose SDR frontend. (GPL-3.0)
GNU Radio	—	—	—	— Free and open-source signal processing framework providing blocks for modulation, demodulation, filtering, and spectrum analysis with graphical flowgraphs. Used by RF engineers and SDR developers; the foundational toolkit for software radio work. (GPL-3.0)
RTL-SDR	—	—	—	— Budget-friendly SDR receiver based on the RTL2832U chipset, widely used for satellite signal reception including NOAA weather satellites and amateur radio. Used by hobbyists and RF researchers; the entry-level hardware for software-defined radio.
WXtoImg	—	—	—	— NOAA weather satellite image decoding software that processes APT signals received via SDR to generate weather imagery with map overlays. Used by weather satellite hobbyists; a classic tool for receiving NOAA APT broadcasts.
Gpredict	—	—	—	— Real-time satellite tracking and orbit prediction software for identifying satellite passes over ground stations and accounting for Doppler shift. Used by satellite operators and SDR hobbyists; a reliable pass-planning tool. (GPL-3.0)
Steampipe	—	—	—	— Zero-ETL SQL tool for querying cloud APIs and services across AWS, Azure, GCP, and Kubernetes. Used by cloud and security engineers; a flexible free-tier query engine.
Ghidra	—	—	—	— Open-source software reverse engineering framework for disassembly and decompilation. Used by reverse engineers and malware analysts; a leading free RE suite.
OllyDbg	—	—	—	— 32-bit assembler-level debugger for Windows binaries. Used by reverse engineers and malware analysts; a classic free debugging tool. (free, proprietary)
x64dbg	—	—	—	— Open-source Windows debugger for x64 and x86 binaries. Used by reverse engineers and malware analysts; a popular free debugging tool.
Cutter	—	—	—	— GUI for Radare2 with advanced analysis features. Used by reverse engineers and malware analysts; a free graphical reverse-engineering front-end.
RetDec	—	—	—	— Open-source decompiler for machine code across multiple architectures. Used by reverse engineers and malware analysts; a free retargetable decompiler.

Frida	—	—	—	— Dynamic instrumentation toolkit for hooking and inspecting running processes. Used by reverse engineers and mobile security researchers; a leading free instrumentation framework.
Rizin	—	—	—	— Fork of Radare2 focused on usability for binary analysis. Used by reverse engineers and malware analysts; a free reverse-engineering framework.
PEiD	—	—	—	— Detects packers, cryptors, and compilers in PE executables. Used by malware analysts and reverse engineers; a classic free identification utility. (free, proprietary)
LIEF	—	—	—	— Library for parsing and modifying executable formats. Used by reverse engineers and security tool developers; a free cross-platform binary analysis library.
mosquitto_sub	—	—	—	— MQTT client for subscribing to IoT device topics, used to test broker authentication and topic ACL enforcement. Used by IoT testers; a standard broker utility. (EPL-2.0)
QEMU	—	—	—	— Emulation platform used with qemu-mips and qemu-mipsel to run extracted embedded binaries in controlled environments. Used by firmware analysts; the standard emulation engine. (GPL-2.0)
ps5dbg-scanner	—	—	—	— Cross-platform Cheat Engine-style tool for PS5 built on the ps5dbg library, supporting value scanning, freeze/edit operations, and server-resident tuning. Used by console game hackers; a specialized memory scanner for PlayStation 5 research.
snort2lua	—	—	—	— Conversion utility included with Snort and Suricata that converts Snort 2.x rules and configuration to Snort 3 Lua format. Used by rule maintainers; a handy migration utility.
Fluentd	—	—	—	— Log collector and forwarder gathering logs from many sources and routing them to other systems for processing. Used by platform engineers; a clean open-source log pipeline component. (Apache-2.0)
Capstone	—	—	—	— Disassembly framework for binary analysis supporting many architectures. Used by reverse engineers and tool developers; a foundational free disassembly engine.
Cryptii	—	—	—	— Web-based modular conversion, encoding, and encryption tool supporting classical and modern ciphers. Used by CTF players and analysts; a handy free browser utility.
Dcode	—	—	—	— Online cipher and code identification/decoding tool covering classical ciphers, modern cryptographic challenges, and CTF tasks. Used by CTF players and puzzle solvers; a broad reference for decoding. (free, proprietary)
LibreWolf	—	—	—	— Privacy-hardened Firefox fork with no telemetry, uBlock Origin pre-installed, DuckDuckGo default search, and built-in DNS-over-HTTPS. Used by privacy-conscious desktop users; a hardened daily browser. (MPL-2.0)
Brave	—	—	—	— Chromium-based browser with built-in ad and tracker blocking plus fingerprinting protection enabled by default, including optional Tor-powered private windows. Used by mainstream privacy adopters; a drop-in private browser. (MPL-2.0)
Mullvad Browser	—	—	—	— Collaboration between Tor Project and Mullvad providing Tor Browser's anti-fingerprinting protections without requiring the Tor network. Used by privacy advocates; a strong anti-fingerprinting browser. (free, proprietary)
Signal	—	—	—	— End-to-end encrypted private messaging with open-source clients and minimal metadata collection. Used by journalists and privacy advocates; the gold standard for private messaging. (GPL-3.0)
Session	—	—	—	— Decentralized messenger requiring no phone number or email, using onion routing for metadata protection on the Oxen network. Used by privacy-focused users; a metadata-resistant messaging option. (GPL-3.0)
Proton Mail	—	—	—	— End-to-end encrypted email service based in Switzerland requiring no personal information to sign up. Used by privacy-conscious individuals; a leading encrypted mail provider with a free tier. (free tier)
Tutanota	—	—	—	— German encrypted email service with open-source clients, a free tier, and post-quantum encryption. Used by privacy-focused users; a future-proof encrypted mail alternative. (GPL-3.0)

OnionShare	—	—	—	— Open-source tool for securely and anonymously sharing files, hosting websites, and chatting over the Tor network via temporary onion services. Used by privacy advocates; a simple Tor-based sharing tool. (GPL-3.0)
SearXNG	—	—	—	— Self-hosted privacy metasearch engine aggregating results from multiple sources without profiling users. Used by privacy-conscious self-hosters; a community-maintained search front-end. (AGPL-3.0)
SimpleLogin	—	—	—	— Email aliasing service creating anonymous addresses to protect your real inbox from spam and data breaches. Used by privacy-minded users; an open-source aliasing solution with a free tier. (MIT)
uBlock Origin	—	—	—	— Efficient wide-spectrum content blocker blocking ads, trackers, and malware domains with minimal resource usage across browsers. Used by millions of users; the most recommended content blocker. (GPL-3.0)
Privacy Badger	—	—	—	— Automatic tracker blocker from the Electronic Frontier Foundation that learns which domains track you and blocks them without configuration. Used by privacy-conscious browsers; an EFF-backed defense. (GPL-3.0)
7-Zip	—	—	—	— Open-source file archiver with AES-256 encryption support for creating encrypted archives on Windows and cross-platform. Used by everyday users; a reliable encrypted archiving utility. (LGPL-2.1)
LaTeX	—	—	—	— High-quality typesetting system often used to produce professional security reports. Used by technical writers and pentesters; a standard for polished document output.
Markdown	—	—	—	— Lightweight markup language for clean, portable report writing. Used by security professionals and developers; a simple way to author readable documentation.
SecuriTool	—	—	—	— Free online collection of 29 client-side web security tools including a web auditor, JWT attacker, CVE search and CSP evaluator. Used by web developers and testers; a handy browser-based toolkit. (free, proprietary)
csp evaluator	—	—	—	— Online evaluator for analyzing and scoring Content-Security-Policy headers. Used by web developers and security engineers; a quick CSP assessment utility. (free, proprietary)
Charles	—	—	—	— HTTP proxy and monitor that lets developers view all HTTP and SSL/HTTPS traffic between their machine and the internet. Used by developers and testers; a long-standing debugging proxy with a limited free tier. (free tier)
AppSec Santa	—	—	—	— Independent comparison of 129+ web application security tools across SAST, DAST, SCA and more. Used by security buyers; a free tool-selection reference. (free, proprietary)
Web Application Exploitation @ R…	—	—	—	— Rawsec inventory list of web application exploitation tools. Used by pentesters; a broad catalog of web testing tools.
MetaDefender	—	—	—	— Multi-engine file and URL malware scanning service. Used by analysts and defenders; a convenient reputation and malware check. (free tier)
