AWESOME CYBER SECURITY HEAVEN · REALM DOSSIER · 2026 EDITION

The Foundry

DevSecOps, Cloud & Container Security Tools

31	206,068	94%	21
FREE TOOLS	COMBINED STARS	ON GITHUB	ACTIVE IN 2026

Intro: Shift security left — SAST, SCA, IaC, SBOM and container scanning that fit the pipeline.

Deep-research edition. Every entry re-verified and enriched with live GitHub statistics (stars, first release, last push, license, language) pulled 2026-10-17 via the GitHub API, plus per-realm field intelligence. Tool profiles rank the realm's most-adopted projects and note who uses each tool and the commercial product it replaces; the full inventory keeps every curated entry.

Part of Awesome Cyber Security Heaven — **444 curated free tools across 14 realms**.

REALM BRIEF

Intro: Shift security left — SAST, SCA, IaC, SBOM and container scanning that fit the pipeline.

FIELD INTELLIGENCE (AI-ASSISTED)

The Foundry DevSecOps, cloud, and container security realm includes 31 curated tools, with 94% hosted on GitHub and an oldest entry dating to March 2009, indicating long-term maturity in the space. Adoption is heavily concentrated in top-starred tools: Trivy leads with 38.5k stars, followed by Semgrep, Prowler, Grype, and OSV-Scanner, while the median tool has 6,778 stars, showing a wide gap between high-performing and mid-tier offerings. Maintenance activity is mixed, with 21 tools receiving code pushes in 2026, leaving 11 quiet classics including OWASP Dependency-Check, ScoutSuite, kube-hunter, and ProgPilot that have not seen recent updates. The dominant programming language is Go, with 8 tools, reflecting a preference for performance-focused, cloud-native tooling, while the license mix is led by Apache-2.0 at 18 tools, aligning with open-source DevSecOps community norms. A key takeaway is that the realm balances established, widely used tools with active development, though the quiet classics suggest some legacy tools may be falling out of active maintenance despite their prior relevance.

Synthesized by seed-2-0-mini over the live census: stars, first-release years, push activity and project claims pulled from the GitHub API on 2026-10-17. Human-curated realm, AI-summarized numbers.

02 Tool Profiles — the heavyweights

full-page dossiers · ranked by adoption

Each heavyweight gets a full dossier: live GitHub census (stars, forks, first-release year, last push, license, language), the project's own claim, our curator's note, **who uses it and which commercial product it replaces**, and its star weight against the realm's #1.

Profiles are ordered by GitHub adoption (stars). Non-GitHub entries follow, alphabetically. Flagship marks the realm's top 8 by stars.

THEIR CLAIM — AS THE PROJECT STATES IT

"GDB"

CURATOR'S NOTE — WHY IT EARNS A PLACE

the GNU debugger: breakpoints, watchpoints and reverse debugging across dozens of architectures.

WHO USES IT · WHAT IT REPLACES

Used by reverse engineers and exploit developers on every platform; the GNU debugger standard for binary analysis.

31 WinDbg

NOT GITHUB-HOSTED · WEBSITE / STANDALONE

THEIR CLAIM — AS THE PROJECT STATES IT

"WinDbg"

CURATOR'S NOTE — WHY IT EARNS A PLACE

the Windows debugger for user, kernel and crash-dump analysis; now with a modern UI.

WHO USES IT · WHAT IT REPLACES

Used by malware analysts and driver developers debugging Windows; Microsoft's debugger at the core of Windows-forensics work. (free, proprietary)
