ABOUT THIS REALM

The Armory — Offensive Security, Pentesting & Bug Bounty Tools

The professional offensive toolkit for authorized engagements, red-team exercises and training labs — the weapons every pentester reaches for first.

The workhorse realm — what you load onto a VPS before a bug-bounty session. Injection proof engines, parameter mining, crawl-and-fuzz chains dominate. We license-check hard here because copyleft contamination matters when findings end up in commercial reports.

- **Active in the last 30 days:** 23 of 38 tracked GitHub repos (61%)
- **Quiet classics (no push in 2+ years, still the standard):** tplmap, JoomScan, ACSTIS
- **Youngest entries:** WhatWeb (2010), Metasploit Framework (2011), sqlmap (2012)
