ABOUT THIS REALM

The Shadow Bureau — OSINT & Public-Intelligence Tools

Public data, lawful purpose — OSINT frameworks, people-search, breach lookups, site monitoring and archive history for investigators, defenders and researchers. These tools only surface what is already public; use them for authorized investigations, defense and education only — never to stalk, harass or dox anyone.

Identifier intelligence without touching the target: stealer-log exposure lookups, phone footprints, historical web archives, username correlation. Passive by design — nothing here alerts the subject of a query.

- **Active in the last 30 days:** 12 of 22 tracked GitHub repos (55%)
- **Quiet classics (no push in 2+ years, still the standard):** holehe, waybackpy
- **Youngest entries:** Nipe (2015), waybackpack (2016), Mitaka (2018)
