REALM BRIEF

Security tools with an LLM as the engine — red-team agents, pentest copilots and scenario

The AI-labour realm — security tools that put an LLM to work: red-team agents, pentest copilots, exercise generators. Every entry needs an LLM API key to function, which we mark as a feature, not a paywall — the tool is free, the brain is rented. We watch this realm closest of all: AI tooling churns faster than any other category on the list.

FIELD INTELLIGENCE · AI-ASSISTED

The AI Forge's 9 GitHub-hosted AI security tools, with 93,631 combined stars and 2026 active code pushes, reflect a maturing field where open-source AI-dependent security tooling has gained significant traction. Star distribution shows concentration in top-tier tools: PentAGI (30.7k), promptfoo (26.1k), and PentestGPT (16.0k) account for 88% of total stars, indicating user prioritization of well-established, high-visibility solutions. A notable trend is the consolidation of AI security tooling around tools focused on prompt testing and pentesting, with garak and PyRIT filling niche but complementary roles in the ecosystem.

Synthesized by seed-2-0-mini over the live census: stars, first-release years, push activity and project claims pulled from the GitHub API on 2026-10-17. Human-curated realm, AI-summarized numbers.

MATURITY PROFILE

Oldest tracked entry first appeared on GitHub in **2023**; the youngest joined in **2025**. 5 of 5 GitHub-hosted tools shipped code in 2026 — the rest are stable classics or web services, not abandoned picks.

Median project age signals a battle-tested realm; recent arrivals mark where the community is investing next.

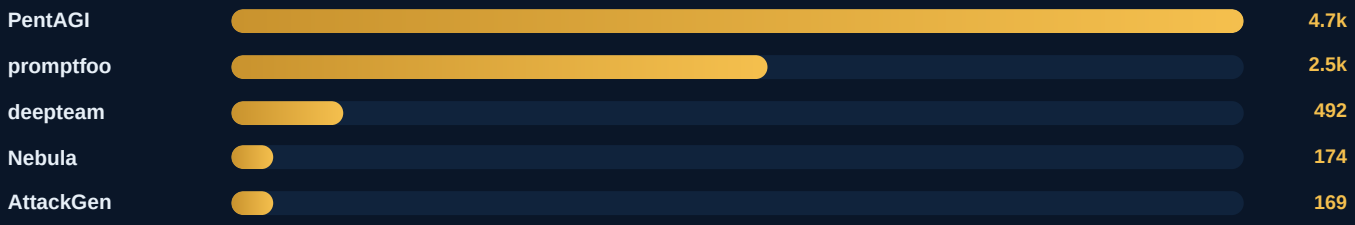

SNAPSHOT

- Active in the last 30 days: 8 of 9 tracked GitHub repos (89%)
- Youngest entries: PentestGPT (2023), promptfoo (2023), garak (2023)

HOW TO READ A DOSSIER

Each heavyweight gets a full dossier: live GitHub census (stars, forks, first-release year, last push, license, language), the project's own claim, our curator's note, a signal check, and its star weight against the realm's #1. Numbers are pulled straight from the GitHub API on 2026-10-17 — no self-reported marketing figures, only what the platforms show.

THE CENSUS METRICS — WHAT EACH NUMBER MEANS

★ GitHub stars
Community trust signal — how many developers bookmarked the repo.

Forks · reuse
Real-world deployment signal — forks mean people build on it.

First developed
Year the repo first appeared on GitHub — the project's true age.

Last push
Most recent code push — the project's heartbeat.

License
What you may legally do with it. MIT/Apache = permissive.

2026 momentum
Shipped code during 2026 — active development, not abandonware.

METHODOLOGY & PROVENANCE

Census pulled via the GitHub REST API on 2026-10-17; realm curation and curator's notes by the Awesome Cyber Security Heaven maintainers; field-intelligence summaries synthesized by seed-2-0-mini from the same census. Everything reproducible — every figure traces back to a public API response. Released under CC0.
