REALM BRIEF

Shift security left — SAST, SCA, IaC, SBOM and container scanning that fit the pipeline.

The pipeline guardians — SAST, dependency scanning, IaC misconfig audits, container hardening. This realm moves fastest of all: CI/CD attack research regularly rewrites the ground rules here.

FIELD INTELLIGENCE · AI-ASSISTED

The Foundry's DevSecOps, cloud, and container security tools show strong maturity: 29 of 31 free tools live on GitHub, with a combined 206,010 total stars, and 21 received code pushes in 2026, indicating active maintenance. Star distribution reveals a clear field hierarchy: Trivy (38.5k), Semgrep (17.1k), and Prowler (15.0k) lead, while newer tools like OSV-Scanner (11.2k) and Grype (13.0k) have gained traction quickly since their 2020–2022 launches. A notable trend is consolidation around open-source vulnerability scanning, with Trivy and Grype emerging as dominant container image scanners, reducing fragmentation in the cloud-native security space.

Synthesized by seed-2-0-mini over the live census: stars, first-release years, push activity and project claims pulled from the GitHub API on 2026-10-17. Human-curated realm, AI-summarized numbers.

MATURITY PROFILE

Oldest tracked entry first appeared on GitHub in **2009**; the youngest joined in **2022**. 18 of 24 GitHub-hosted tools shipped code in 2026 — the rest are stable classics or web services, not abandoned picks.

Median project age signals a battle-tested realm; recent arrivals mark where the community is investing next.

SNAPSHOT

- Active in the last 30 days: 17 of 29 tracked GitHub repos (59%)
- Archived upstream (kept — still reference-quality): [OWASP Dependency-Check](https://github.com/jeremylong/DependencyCheck)
- Quiet classics (no push in 2+ years, still the standard): kube-hunter, sobelow, logdissect, Awesome ICS Security, Awesome Container Security
- Youngest entries: cppcheck (2009), Brakeman (2010), Dependency-Track (2013)

HOW TO READ A DOSSIER

Each heavyweight gets a full dossier: live GitHub census (stars, forks, first-release year, last push, license, language), the project's own claim, our curator's note, a signal check, and its star weight against the realm's #1. Numbers are pulled straight from the GitHub API on 2026-10-17 — no self-reported marketing figures, only what the platforms show.
