REALM BRIEF

Free (or free-tier) data sources every security program should be using — no budget required.

Free-tier services and keyless data — the APIs and feeds you can call today without a credit card. Free tiers shrink; we re-verify this realm's limits on every monthly pass and annotate the moment a vendor tightens them.

FIELD INTELLIGENCE · AI-ASSISTED

The Free Bazaar cybersecurity API and data feed space shows a mature, well-established maturity profile, with 30 free tools, 10 hosted on GitHub, and a combined 117,528 total stars, indicating broad community validation. The star distribution is heavily skewed toward long-running foundational resources: SecLists (74.2k stars, launched 2012) and Awesome Pentest (27.4k stars, 2014) account for 87% of total stars, while newer niche tools like EVTX-ATTACK-SAMPLES (2.6k stars, 2019) and Security Datasets (1.8k stars, 2018) have far smaller followings. A notable trend is consolidation of community-curated pentest resources, with the two highest-starred tools dominating the space, and only 6 tools receiving code pushes in 2026, suggesting reduced active development for most niche offerings.

Synthesized by seed-2-0-mini over the live census: stars, first-release years, push activity and project claims pulled from the GitHub API on 2026-10-17. Human-curated realm, AI-summarized numbers.

MATURITY PROFILE

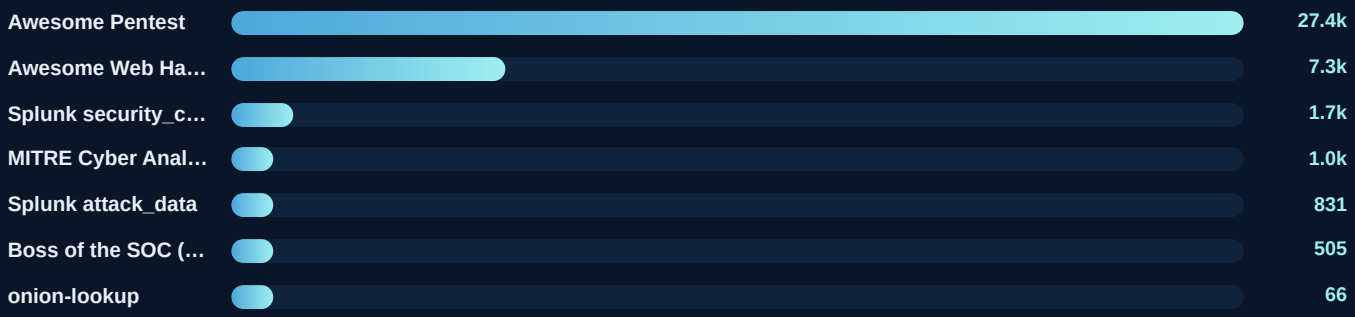

Oldest tracked entry first appeared on GitHub in **2014**; the youngest joined in **2024**. 5 of 7 GitHub-hosted tools shipped code in 2026 — the rest are stable classics or web services, not abandoned picks.

Median project age signals a battle-tested realm; recent arrivals mark where the community is investing next.

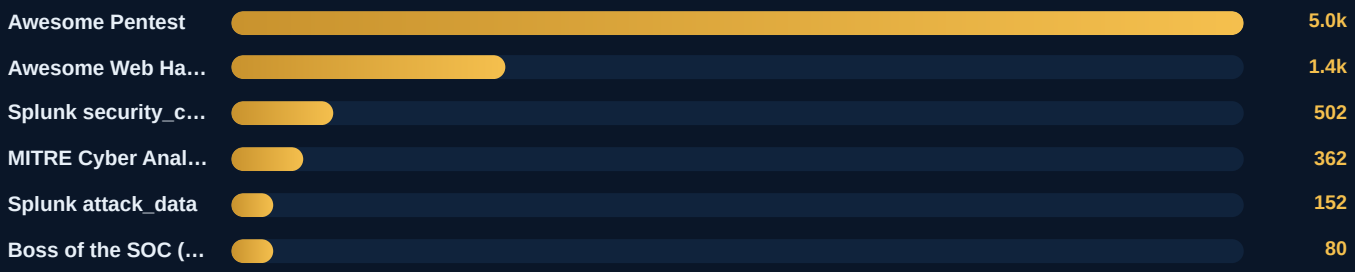

SNAPSHOT

- Active in the last 30 days: 4 of 10 tracked GitHub repos (40%)
- Quiet classics (no push in 2+ years, still the standard): Security Datasets, EVTX-ATTACK-SAMPLES, Boss of the SOC (BOTS)
- Youngest entries: SecLists (2012), Awesome Pentest (2014), Awesome Web Hacking (2015)

HOW TO READ A DOSSIER

Each heavyweight gets a full dossier: live GitHub census (stars, forks, first-release year, last push, license, language), the project's own claim, our curator's note, a signal check, and its star weight against the realm's #1. Numbers are pulled straight from the GitHub API on 2026-10-17 — no self-reported marketing figures, only what the platforms show.

THE CENSUS METRICS — WHAT EACH NUMBER MEANS

★ GitHub stars
Community trust signal — how many developers bookmarked the repo.

Forks · reuse
Real-world deployment signal — forks mean people build on it.

First developed
Year the repo first appeared on GitHub — the project's true age.

Last push
Most recent code push — the project's heartbeat.

License
What you may legally do with it. MIT/Apache = permissive.

2026 momentum
Shipped code during 2026 — active development, not abandonware.

METHODOLOGY & PROVENANCE

Census pulled via the GitHub REST API on 2026-10-17; realm curation and curator's notes by the Awesome Cyber Security Heaven maintainers; field-intelligence summaries synthesized by seed-2-0-mini from the same census. Everything reproducible — every figure traces back to a public API response. Released under CC0.
