REALM BRIEF

Detect, hunt, forensicate — the defensive operations toolkit.

The largest realm — detection engineering, ATT&CK-aligned datasets, SIEM labs and DFIR toolkits. The fingerprinting standards (JA3, HASSH) live here: archived upstream, still canonical, still cited in nearly every detection paper.

FIELD INTELLIGENCE · AI-ASSISTED

This curated collection of 47 free blue team, SOC, and DFIR tools shows a mature, well-established field, with 46 hosted on GitHub and a combined 224,143 total stars, 42 of which received code pushes in 2026. The star distribution reflects sustained community trust: osquery (23.7k stars, 2014) leads, followed by Wazuh (17.3k, 2015), Atomic Red Team (12.7k, 2017), Sigma (11.3k, 2016), and awesome-honeypots (10.6k, 2015), all built for core defensive workflows. A notable trend is consolidation around open-source frameworks that standardize detection engineering and threat simulation, with Sigma's widespread adoption as a universal signature language driving cross-tool interoperability across the ecosystem.

Synthesized by seed-2-0-mini over the live census: stars, first-release years, push activity and project claims pulled from the GitHub API on 2026-10-17. Human-curated realm, AI-summarized numbers.

Median project age signals a battle-tested realm; recent arrivals mark where the community is investing next.

SNAPSHOT

- Active in the last 30 days: 26 of 46 tracked GitHub repos (57%)
- Quiet classics (no push in 2+ years, still the standard): sysmon-config, Revoke-Obfuscation, DeepBlueCLI, HELK
- Youngest entries: The Sleuth Kit (2011), Arkime (2012), Zeek (2012)

HOW TO READ A DOSSIER

Each heavyweight gets a full dossier: live GitHub census (stars, forks, first-release year, last push, license, language), the project's own claim, our curator's note, a signal check, and its star weight against the realm's #1. Numbers are pulled straight from the GitHub API on 2026-10-17 — no self-reported marketing figures, only what the platforms show.
