REALM BRIEF

Public data, lawful purpose — OSINT frameworks, people-search, breach lookups, site monitoring and archive history for investigators, defenders and researchers. These tools only surface what is already public; use them for authorized investigations, defense and education only — never to stalk, harass or dox anyone.

Identifier intelligence without touching the target: stealer-log exposure lookups, phone footprints, historical web archives, username correlation. Passive by design — nothing here alerts the subject of a query.

FIELD INTELLIGENCE · AI-ASSISTED

The Shadow Bureau's OSINT toolset shows strong maturity: 29 free tools, 22 hosted on GitHub, with combined 189,398 stars and 18 code pushes in 2026, indicating active maintenance. Star distribution reveals high demand for identity-focused OSINT, with Maigret and Holehe leading at 39.1k and 15.2k stars respectively, while web-check and changedetection.io (35.1k each) reflect growing interest in web monitoring. A notable trend is consolidation of niche OSINT functions into versatile tools, seen in changedetection.io's adoption for tracking public web changes across use cases.

Synthesized by seed-2-0-mini over the live census: stars, first-release years, push activity and project claims pulled from the GitHub API on 2026-10-17. Human-curated realm, AI-summarized numbers.

MATURITY PROFILE

Oldest tracked entry first appeared on GitHub in **2016**; the youngest joined in **2026**. 11 of 15 GitHub-hosted tools shipped code in 2026 — the rest are stable classics or web services, not abandoned picks.

Median project age signals a battle-tested realm; recent arrivals mark where the community is investing next.

SNAPSHOT

- Active in the last 30 days: 12 of 22 tracked GitHub repos (55%)
- Quiet classics (no push in 2+ years, still the standard): holehe, waybackpy
- Youngest entries: Nipe (2015), waybackpack (2016), Mitaka (2018)

HOW TO READ A DOSSIER

Each heavyweight gets a full dossier: live GitHub census (stars, forks, first-release year, last push, license, language), the project's own claim, our curator's note, a signal check, and its star weight against the realm's #1. Numbers are pulled straight from the GitHub API on 2026-10-17 — no self-reported marketing figures, only what the platforms show.

THE CENSUS METRICS — WHAT EACH NUMBER MEANS

★ GitHub stars
Community trust signal — how many developers bookmarked the repo.

Forks · reuse
Real-world deployment signal — forks mean people build on it.

First developed
Year the repo first appeared on GitHub — the project's true age.

Last push
Most recent code push — the project's heartbeat.

License
What you may legally do with it. MIT/Apache = permissive.

2026 momentum
Shipped code during 2026 — active development, not abandonware.

METHODOLOGY & PROVENANCE

Census pulled via the GitHub REST API on 2026-10-17; realm curation and curator's notes by the Awesome Cyber Security Heaven maintainers; field-intelligence summaries synthesized by seed-2-0-mini from the same census. Everything reproducible — every figure traces back to a public API response. Released under CC0.
