REALM BRIEF

See what's coming — intel platforms, knowledge bases, ransomware trackers and exposure watchtowers.

Feeds, frameworks and enrichment for the SOC's morning routine. Threat-intel platforms, IOC pipelines and detection-as-data. Most entries here are pipelines rather than point tools — chaining them is the whole game.

FIELD INTELLIGENCE · AI-ASSISTED

The Watchtower threat intelligence tools feed's 16 free tools (10 on GitHub, 55,928 combined stars) show a mature, established field with long-running core projects: SpiderFoot (2012, 23.5k stars) leads, followed by OpenCTI (2018, 10.2k) and MISP (2013, 6.6k), while newer tools like IntelOwl (2019, 4.8k) and firehol/blocklist-ipsets (2015, 3.9k) fill specialized gaps. Star distribution confirms sustained community investment in foundational open-source threat sharing and reconnaissance tools, with 10 projects receiving code pushes in 2026 indicating ongoing maintenance. A notable trend is consolidation around interoperable platforms: OpenCTI and MISP, both designed to integrate with third-party feeds, are emerging as central hubs for teams unifying threat data from tools like SpiderFoot and IntelOwl.

Synthesized by seed-2-0-mini over the live census: stars, first-release years, push activity and project claims pulled from the GitHub API on 2026-10-17. Human-curated realm, AI-summarized numbers.

HOW TO READ A DOSSIER

Each heavyweight gets a full dossier: live GitHub census (stars, forks, first-release year, last push, license, language), the project's own claim, our curator's note, a signal check, and its star weight against the realm's #1. Numbers are pulled straight from the GitHub API on 2026-10-17 — no self-reported marketing figures, only what the platforms show.
