🎓 AWESOME CYBER SECURITY HEAVEN · REALM DOSSIER · 2026 EDITION

The Academy

Cybersecurity Learning Resources & Career Paths

25	165,360	40%	7
FREE TOOLS	COMBINED STARS	ON GITHUB	ACTIVE IN 2026

Intro: Learn the craft — free academies, knowledge bases, walkthroughs and career roadmaps.

Deep-research edition. Every entry re-verified and enriched with live GitHub statistics (stars, first release, last push, license, language) pulled 2026-10-20 via the GitHub API, plus per-realm field intelligence. Tool profiles rank the realm's most-adopted projects and note who uses each tool and the commercial product it replaces; the full inventory keeps every curated entry.

Part of Awesome Cyber Security Heaven — **459 curated free tools across 14 realms**.

REALM BRIEF

Intro: Learn the craft — free academies, knowledge bases, walkthroughs and career roadmaps.

FIELD INTELLIGENCE (AI-ASSISTED)

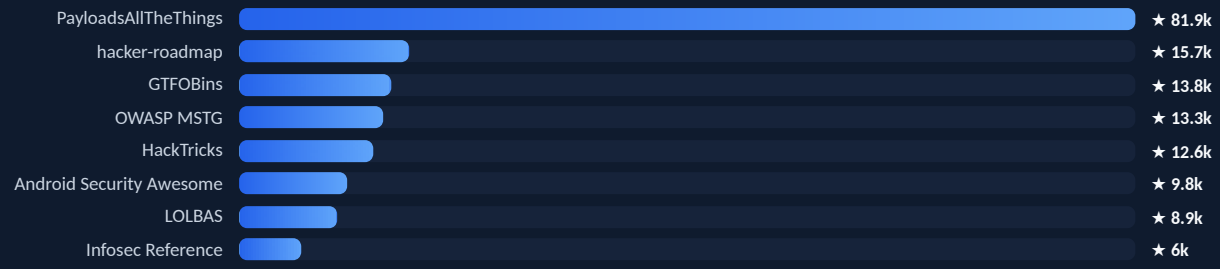

This Academy realm of cybersecurity learning resources and career paths includes 25 curated tools, with 40% hosted on GitHub and only 7 of those GitHub-hosted tools receiving code pushes in 2026, indicating a mixed maintenance cadence across the curated set. Adoption is heavily concentrated in the top five starred tools, which account for the vast majority of the combined 165,360 total GitHub stars for the realm, led by PayloadsAllTheThings at 81.9k stars alone. The 2026 push activity signals that most of the highest-traffic, highest-starred resources are actively maintained, while three quiet classics including hacker-roadmap have not received code updates this year, suggesting they remain stable reference materials rather than evolving tactical guides. The median star count of 9,768 confirms the top tools carry outsized visibility relative to the broader curated set, and the oldest entry dating to 2014-07-22 shows the realm includes long-standing, widely vetted learning assets alongside newer additions. The license mix is split evenly across MIT, Apache-2.0, GPL, and other/none categories, with no dominant language among the small subset of tools with listed codebase languages. A key operational takeaway is that teams relying on the quiet, unupdated classic resources should cross-reference their content against actively maintained tools to catch any gaps from evolving infosec frameworks or tactics.

Synthesized by seed-2-0-lite over the live census: stars, first-release years, push activity and project claims pulled from the GitHub API on 2026-10-20. Human-curated realm, AI-summarized numbers.

02 Tool Profiles — the heavyweights

full-page dossiers · ranked by adoption

Each heavyweight gets a full dossier: live GitHub census (stars, forks, first-release year, last push, license, language), the project's own claim, our curator's note, **who uses it and which commercial product it replaces**, and its star weight against the realm's #1.

Profiles are ordered by GitHub adoption (stars). Non-GitHub entries follow, alphabetically. Flagship marks the realm's top 8 by stars.
